

## Summary

I am an art, music and manual labor lover and I started to design and build my own guitars while in highschool. I have been practicing product and graphic design since the start of my engineering studies when I started my freelance work. This combination of skills grants me a unique view of the field of design, allowing me to work with the whole product creation pipeline, from the most technical to the most creative aspects. Pushed by my curiosity and driving force, I am always looking for new skills and tools to meticulously bring my creations as far as they can go.

### Alexandre Albisser

3D Artist / Designer
